

Effekter av skadereducerande insatser vid skadligt bruk eller beroende av narkotika

Fråga

Vilken sammanställd forskning finns om positiva och negativa effekter, för individer och samhällen, av skadereducerande insatser till personer med skadligt bruk eller beroende av narkotika?

Frågeställare: S 2022:01 Narkotikautredningen

Bakgrund

Skaderedukering inom narkotikaområdet, på engelska ”harm reduction”, saknar en allmänt accepterad definition. Världshälsoorganisationen (WHO) beskriver begreppet så här: “Harm reduction is a set of policies, programmes, services and actions that aim to reduce the harm to individuals, communities and society related to drugs, including HIV infection.” [1].

I Narkotikautredningens direktiv [2] ingår att göra en internationell utblick av tillgängliga skadereducerande insatser och den aktuella utvecklingen inom området, samt vid behov lämna förslag på nya insatser som bör vidtas i Sverige för att minska de medicinska och sociala skadeverkningarna av narkotikabruk.

Frågeställning och avgränsningar

Upplysningsjänsten har tillsammans med frågeställaren formulerat frågan enligt följande PICO¹:

- **Population:** Personer med skadligt bruk eller beroende (missbruk) av narkotika, inklusive narkotikaklassade läkemedel utanför ordination
Exkludera: Studier som främst rör alkohol
- **Intervention:** Skadereducerande insatser inom sjukvård eller socialtjänst som präglas av låga trösklar och krav för att få tillgång till insatsen
Exkludera: Policyer, strategier
- **Control:** Ingen insats, sedvanlig insats, annan insats utan låga trösklar och med krav för att få tillgång till insatsen
- **Outcome:** Exempel på utfall av intresse på individ- och samhällsnivå:
 - Etablerad kontakt med målgruppen
 - Livskvalitet, funktionsförmåga
 - Bostadssituation
 - Kriminalitet
 - Riskbeteenden
 - Grad av droganvändning
 - Fysisk och psykisk hälsa
 - Narkotikarelaterad dödlighet (överdoser och förgiftningar)
 - Effekter i lokalsamhället
 - Att genom insatsen komma i kontakt med annan vård, stöd och behandling
 - Tillfrisknande med drogfrihet som mål, rehabilitering
 - Insatsens förenlighet med rådande narkotikapolitik
 - Kostnadseffektivitet
- **Övriga avgränsningar:**

Setting: Sjukvård, socialtjänst och frivilligorganisationer

Exkludera: Studier med fokus uteslutande på låginkomstländer

Studiedesign: I första hand söktes systematiska översikter (SÖ) av kontrollerade studier med eller utan randomisering. Om sådana inte hittades söktes även SÖ av observationsstudier (kohortdesign, fall-kontroll-design, tvärstudsstudier).

Exkludera: Kvalitativ forskning

Tid: Ingen avgränsning

Språk: Engelska eller de skandinaviska språken

Publikationstyp: Publicerad i vetenskaplig tidskrift med peer-review

¹ PICO är en förkortning för patient/population/problem, intervention/index test, comparison/control (jämförelseintervention) och outcome (utfallsmått).

Litteratursökning gjordes i Medline (Ovid), PsycINFO (Ebsco), SocIndex (Ebsco) samt i Criminal Justice Abstracts (Ebsco) (se sökdokumentation Bilaga 1).

Vid gallring av identifierade artiklar kopplat till den parallellt undersökte frågan om benägenhet att söka vård och stöd märkte vi upp artiklar som potentiellt kan vara relevanta för frågan om skaderedukering. Vi sökte även efter rapporter om skadereducerande insatser inom socialtjänstområdet på SBU:s webbplats.

Systematiska översikter samt reviews of reviews, scoping reviews och literature reviews med väl utförd och dokumenterad litteratursökning inkluderades, liksom olika typer av SBU-rapporter.

Upplysningstjänsten bedömde i detta svar inte risken för bias (snedvridning) i översikterna och därmed redovisades inte heller några resultat.

Resultat från sökningen

Upplysningstjänstens litteratursökning genererade totalt 396 artikelsammanfattningar (abstrakt) efter dubblettkontroll. Dessutom identifierades 11 artiklar genom handsökning samt fem SBU-rapporter. Två projektledare på SBU läste alla artikelsammanfattningar och bedömde att 75 översikter kunde vara relevanta för frågan. Dessa artiklar lästes i fulltext av två projektledare, med fokus på att bedöma om artiklarna svarade på den aktuella frågeställningen (PICO) och om publikationstypen överensstämde med inklusionskriterierna. De artiklar som inte var relevanta för frågan exkluderades. Exkluderade artiklar finns listade i Bilaga 3.

Inkluderade översikter

SBU:s Upplysningstjänst identifierade 29 översikter och en rättelse (corrigendum) som vi bedömde kunde vara relevanta sett till PICO och publikationstyp. Översikterna finns listade i Bilaga 2, uppdelat i tabell A och B. I tabell A listas artiklar som klassats som systematiska översikter och i tabell B översikter som till stor del uppfyller kraven för en systematisk översikt, men där översiktsförfattarna benämnt artikeln som review of review, scoping review eller literature review. I tabellerna har vi även markerat vår tolkning av om insatserna genomförts inom hälso- och sjukvård, socialtjänst (eller liknande verksamheter), eller inom båda. Vi har också markerat vilka översikter som inkluderar utfallet död. Observera att vi inte har kvalitetsbedömt översikterna med avseende på risken för bias (risken för snedvridning av resultat). Flera av artiklarna i Bilaga 2 kan därför utgöras av översikter som vi skulle ha bedömt ha en högre risk för bias än vad vi normalt inkluderar i svar från Upplysningstjänsten [3].

Inkluderade SBU-rapporter

SBU har publicerat följande rapporter inom socialtjänstområdet som vi bedömde kan vara relevanta för frågan:

- År 2019 genomförde SBU en kartläggning av kunskapsläget utifrån systematiska översikter gällande utredningar och insatser inom socialtjänsten vid missbruk och beroende av alkohol och narkotika [4].
- I en SBU Kommentar från år 2018 [5] sammanfattade och kommenterade SBU en systematisk litteraturöversikt från Folkhelseinstituttet i Norge. Översikten jämförde insatser för hemlösa personer och för personer som riskerade att bli hemlösa, och analyserade insatsernas effekter på hemlöshet. I majoriteten av studierna bedömdes personerna ha psykisk ohälsa, substansberoende, eller båda. ”Bostad först” fanns bland de utvärderade insatserna.
- SBU tog år 2017 fram vetenskapligt underlag till Socialstyrelsens nationella riktlinjer för vård och behandling vid schizofreni [6]. Ett av kapitlen berör Assertive Community Treatment (ACT) och samtidigt missbruk.
- År 2016 utvärderade SBU program för ungdomar med antisocial problematik inom institutionsvård [7]. Ett av de utvärderade programmen var Adolescent Community Reinforcement Approach (A-CRA), vilket kan tolkas som en skadereducerande insats i samband med utskrivning från institutionsvistelse.
- SBU:s Upplysningstjänst sammanställde år 2022 forskningen om psykologisk behandling via videosamtal vid skadligt bruk eller beroende av substanser [8].
Insatserna omfattade vårdkontakt eller psykologisk behandling, insatser som hör till hälso- och sjukvården. Vi valde ändå att inkludera detta svar från Upplysningstjänsten.

Lästips

I Bilaga 4 listas nio översikter som kan vara av intresse för utredningen, trots att vi bedömde att de inte uppfyllde alla uppställda kriterier för inklusion. Referenserna till samtliga lästips hittas i Bilaga 3, där även huvudsaklig exklusionsorsak anges.

Projektgrupp

Detta svar är sammanställt av Annicka Hedman (projektledare), Uliana Hellberg (biträdande projektledare), Ann Kristine Jonsson (informationsspecialist), Sara Fundell (projektadministratör), Laura Lintamo (utredare), Irene Edebert (produktsamordnare) samt Pernilla Östlund (avdelningschef) vid SBU.

Publication

En översikt av Kourounis och medarbetare från år 2016 syftade till att summera och definiera "treatment thresholds" inom "opioid substitution therapy", samt beskriva hur dessa trösklar relaterar till behandlingsutfall.

Marshall och medarbetare undersökte i en översikt från år 2015 vilken roll personer med egen erfarenhet av att injicera narkotika kan ha i skadereducerande insatser.

Även Mercer och medarbetare undersökte i en översikt från år 2021 kamratstöd från personer med egen erfarenhet av narkotikaanvändning inom ramen för interventioner för överdosprevention. Dödlighet ingick bland utfallen i de inkluderade studierna.

En scoping review av Krawczyk och medarbetare från år 2021 beskrev nya och anpassade behandlingar och skadereducerande insatser till personer med opioidberoende som aktualiseras under covid-19-pandemin.

I en integrative review från år 2021 undersökte Bouzanis och medarbetare program och insatser i Kanada som syftade till prevention och hantering av infektionssjukdomar bland personer som injicerar droger. Dödlighet ingick bland utfallen i de inkluderade studierna.

Smart och medarbetare undersökte i en översikt från år 2021 vilken effekt amerikanska lagar om tillgång till naloxon haft gällande bland annat överdosdödlighet.

McAuley och medarbetare undersökte i en översikt från år 2015 effekten av att träna kamrater att ge naloxon. Dödlighet ingick bland utfallen i de inkluderade studierna.

I en översikt från år 2016 undersökte Melendez-Torres och medarbetare promotions- och preventionsinsatser gällande rökning, alkohol, droganvändning och våld för ungdomar i åldrarna 11 till 18 år utan kända problemtillstånd.

Watson och medarbetare undersökte i en rapid review och dokumentanalys från år 2017 hur housing first-modellen beskrivs i amerikansk och kanadensisk forskning, med fokus på om modellen omnämns i relation till harm reduction.
